

Team Ownership & Integration Contracts — Intoxalock Device Removal

Integration Contract Registry

#	Contract	Trigger	Payload & Response (key fields)
C1	Start Automated Confirmation (webhook)	Intake passes the Eligibility Gate.	Request <pre>{ "customer": { "id": "string", "phone": "E.164", "email": "string", "name": "string" }, "assigned_service_center": { "id": "string", "phone": "E.164", "name":"string", "timezone": "string" }, "customer_prefered_time_slots": ["string", "string"], "vehicle": { "make": "string", "model": "string", "year": 2020 }, "eligibility": true}</pre> Response — 202 <pre>{ "request_id": "uuid" }</pre>
C2	Appointment Confirmed (→ Work Order + notify)	Appoiment confirmation with quote .	Request <pre>{ "request_id": "uuid", "confirmed_date_time": "string", "customer_id": "string", "service_center_id": "string", "quote": { "amount": float }, "scheduled_time_slots": ["string"]}</pre> Response — 200 <pre>{ "work_order_id": "string" }</pre>
C3	Exception / Escalation	No agreement, TTL expiry.	Request <pre>{ "requestId": "uuid", "customer": { "id": "string", "phone": "E.164", "email": "string", "name": "string" }, "assigned_service_center": { "id": "string", "contact": "string", "name": "string" }, "reason": "NO_AGREEMENT MAX_SERVICE_CENTER_RETRIES MAX_CUSTOMER_RETRIES TTL_EXPIRED", "last_state": "string", "full_history": [{ "time_stamp": "string", "channel": SMS EMAIL AI_VOICE_AGENT, "event": "string" , result : SUCCESS FAILURE}]}</pre> Response — 200 <pre>{ "ticket_id": "string" }</pre>

Step Functions (Standard) Workflow — 1 execution = 1 Removal Request

Hash-based Message Authentication Code (HMAC)

REQUEST INTAKE (pre-execution)

Volume Requirements :
Worst case scenario: 50 request/second
~ 5000 request a month
~ 200 request a day

Customer

App form

Intoxalock backend

- Check request eligibility for automated workflow

- Send confirmation to users that the request is being processed

Webhook (HMAC)

Phone / IVR (not for this phase?)

API Gateway (HTTP API) /intake endpoint

Lambda: api-handler — auth · validation · computes center-open target (tz-aware)

Intake Request (api-handler Lambda)

Start Confirmation Orchestrator

AWS Step Functions — Standard Workflow

Start

Wait (TimestampPath) · center-open target passed in from intake

Wait Until Center Open

Escalate request to human

STAGE - CENTER CONFIRMATION — voice-first (ElevenLabs + Twilio) > Phase 2

Choice · now vs latestStartTime (computed at intake)

Enough Time to Confirm?

too late

Escalate request to human

in time

Task · startExecution.sync · center agent (vehicle + slots) · maxConcurrent=3, maxRetries=4

Place Outbound Call

Choice · on webhook result

Center Response?

UNREACHABLE

Escalate request to human

DECLINED + alt possible slots

STAGE - CUSTOMER CALLBACK (decline path) — Slot Hold Window · voice confirm new date · retry x4

Task · startExecution.sync · customer agent (new date) · timeout=holdDeadline · maxConcurrent=3, maxRetries=4

Place Outbound Call

Choice · on webhook result

Customer Response?

REJECTED / HOLD_EXPIRED / UNREACHABLE

Escalate request to human

STAGE - WORK ORDER & CONFIRM — external Work Order API → confirmed Customer SMS/email

Task · startExecution.sync · Intoxalock Work Order API · Retry + Catch

Create Work Order & Notify

Intoxalock backend

- Creates the work order

- Notifies the customer (SMS + email)

work order issued ✓

STAGE - REMINDERS — Wait T-12h → appointment reminder

Wait (TimestampPath) · appointment — 12h

Wait Until T-12h

Lambda · SMS + email reminder

Send Appointment Reminder

Succeed (Confirmed)

STAGE - ESCALATION (shared) — escalate-to-rep API + full history

Lambda · calls escalate-to-rep API · Retry + Catch

Escalate to Human Rep

Intoxalock backend

- Hands off to a human rep

End (Escalated)

OUTBOUND CALL SERVICE · separate Standard state machine (reusable) reserves a line (concurrency cap and retries set by caller) · dials via voice agent · retries · returns the outcome · invoked via startExecution.sync

Input: { agent, payload, callTimeout, maxConcurrent, maxRetries } · concurrency cap + retry count set by the caller

DynamoDB · activeCalls +1 if under maxConcurrent (from caller) · conditional write

Try to Reserve a Line (atomic)

Choice · reservation succeeded?

Reserved?

all lines busy

Lambda · dial via ElevenLabs agent (center l customer · by input) + Twilio · waitForTaskToken

Place Call

DynamoDB · activeCalls -1 · also on Catch

Release the Call Line

Choice · call connected and got an answer?

Answered?

connected → outcome

returns { status, structuredResult } to caller

Return

no answer / busy

give up → UNREACHABLE

Choice · attempts ≤ maxRetries (from caller) and before callTimeout

Retry?

yes (≤ max, before deadline)

wait, then re-dial

wait and retry

wait, poll interval

Wait for a Free Line

Wait · configurable retry interval (SSM)

Wait Before Retry

Wait · poll interval

Wait for a Free Line

Wait · configurable retry interval (SSM)

Wait Before Retry

Wait · poll interval

Wait for a Free Line
